                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunoglobulin heterotetramer aubunit consists of two identical light (kappa or lambda) and two identical heav (alpha deltas peptilon gamma, or man) thatia sucally stabilized by interchain disulfide bonds. In some cases, such as Igh and 198, the aubunits associate into larger oligomers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 16; DB 2; Length 120;

PY comprising diser of single-chain by fragments . PS Example 1; Columns 31-36; 30pp; English.

CC variable heavy (WH) and variable light (W1) sense were cloned from ca $2009 hybridona cDNA library, using probes directed troad the cc antibody constant and joining regions. A two single chain PY (PF) ce yene was constructed by connecting the W1 and W1 genes with PF (PF) ce yene was constructed by connecting the W1 and W1 genes with proceed to the present sequence, was inserted into an expression control to the culture medium. The standard of the W1 and W1 genes with the companion of carrier and the 2 sFy protein prod. can be affect in wive language, and drug targetting experiments. The case for in wive language as a monodium.

CC A compan, complains a carrier and the 2 sFy protein prod. can be compared to the wive language and drug targetting experiments arget the search products a homodium. In windows how for the search products a carrier and the CC longer times generation times, compared to individual sFy protein compared fragments execution times, compared to individual sFy protein sequence 243 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match 19.3%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pt. of about 5.3 (see 046083, R39568). A single chain FV (gFV) is a covalently linked WFV hetroduler which is expressed from a gene fusion including VH and VL, encoding gene exponenced when a peptide-monoding linker. Such linker sequences are set forth in A residues 116-115 in R39569, which includes part of the 16 Au. linker sequences in R39572. Using 046084 for the 52059 monoclonal antibody, a single chain polypeptide can be produced having a binding affinity for a ceable 2 related antipon. X' in R39569 sequence 246 Au.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         19 13:23:51

This sequence was isolated from a variested display library (7DL) of variable regions derived from a repertoire of antibodies from an immunotoletised animal. The VDL is generated by PCR amplifying the curiable regions from the antibody coding sequences using the primers of 4153-74. The variable regions, esp the complementarity determining of regions (CDR) from the immunotoletised and the construct an antibody spainal and the formation of the formation of the sequence with the sequence of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8 B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ម្តីមិន្ត្រី មិន្ត្រី មិន្ត្តិ មិន្ត្រី មិន្តិ មិន្ត្រី

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Catalytic antibody for enantioselective hydrolysis of amino acid escribe also may hybridoms secreting the antibody scribe as a some hybridoms secreting the antibody scribe and the secreting the secreting the secreting the secreting and the secreting the setter are 4-dittors acid enters continues lectively. Preferably the setter are 4-dittor beary! esters and the setcrified amino acids are amino protected. Also disclosed are now hybridoms expressing the ortalytic antibodies, also disclosed are now hybridoms expressing the catalytic authority. Also disclosed are now hybridoms expressing the compound printrobers; and the secretially EAA-021 (Frems 19-494) and EAA-021 (Frems 19-494). The especially active using and chiral separation for the production of optically active drugs and chiral separation agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   agence.
The present sequence represents the variable region of the third of antibody 362, produced by the hybridoma EAA362.
Sequence 216 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13:23:51

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Re Example 9: #19 6: 99pp: English.

Re Ausside Wisses represent portions of the antibodies of the invention. The cause the study wisses represent portions of the arraphe isoform of prion control nervous in situ. Prions are insectious pathogens that cause control nervous in situ. Prions are insectious pathogens that cause control nervous in situ. Prions are insectious pathogens that cause the arraphe isoform of the prion protein [PP-Sc) is Recessary for both the transmissible neurodegenerative the transmissible neurodegenerative control to the control prion protein of the formal situation of the detecting human antibodies can be used in a method of the invention for detecting human antibodies can be used in a method of the invention for detecting humans associated with disease and do not control to the statict of the prion proteins of a specific apprison of the static way and also have the shilly to neutralise infectious prions mands. They can also have the shilly to neutralise infectious prions mands. They can also have the shilly to neutralise infectious prions mands. They can also be used of prions the products and protection of prion proteins or centralise into to priinfy products, for extraction of prion proteins or centralise into to priinfy products, for extraction of prion proteins or centralise into the prion and the prion proteins or centralise into the prion and the prion proteins or centralise into the prion and the prion proteins or centralise into the prion and the prion proteins or centralise into the prion and the prion proteins or centralise into the prion and the prion proteins or centralise into the prion proteins or the prion proteins or centralise into the prion proteins or the prion proteins or centralise into the prion prion prion proteins or the prion proteins or the prion proteins or the prion prion 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ą

Murine monoclonal anti-idiotypic antibodies, 1598, 386 and 586 are
new. They induce an immune response against epidermal growth factor
receptor (EEFR). The sequences of the heavy and light chain variable
respons of these antibodies are given in the specification. The
antibodies are used for the manufacture of drugs directed against
tumours that express EEFR on their surface, including melanomas,
glionas and carcinomas.
                                                                                                                                                                                                                                                                                                                                                                 19 13:23:51
                                                                                                                                                                                                                                                                                                                                                                 1999

Some of the primers used for cDNs synthesis are shown in 097518, 1097518 in the primer used for cDNs synthesis of the variable region of a particular antibody polypeptide was also used for pCR amplification of that variable region, in conjunction with an appropriate v-region primer. In addition, the VN primer 097518 was used to amplify the mab 2DS and 386 heavy chains. The sequences of the PCR amplified nucleotides were determined. These are given in 097489-097510 and the deduced As sequences in R79341-R79250 is R79374-R79971. The descriptions of the SED ID nos given on the sequence listings. The descriptions in the sequence listings are expensed.

ogunidine isothicognante, First strand cDNA synthesis was catalysed by Milx process transcriptase. The princes used for cDNA synthesis was catalysed were complementary to the 5 and of the CHI domain of the heavy of the chine expressed by the hybridoms of interest, or to the 5' and of the chine princest of the the 5' and of the chine princest of the princest of the solven in 07511-097518. The princest used for cDNA synthesis of the catalyst region of a particular antibody polypeptide was also used of PRA supplification of that watable region, in conjunction with the appropriate v-region princes. In addition, the Wiprimer 097518 or a superior to amplify the mbb 25b and 586 heavy chains. The sequences of the PRA supplified nucleotides were determined. These are given to 199749997310 and the deduced An sequence on RF3941-RF9350 at 19974997310 and the deduced An sequence on RF3941-RF9350 at 19974997310 and deferring the descriptions of the sequence listings. The descriptions in the sequence listings are caused here 1974 As 1974

pharmacology, medicine and blochemical fields.

Exampla 5, 2ege 22; 2mpy, Japanese
R74960-R74969 are clones of the anti-idiotype antibodies idio3, Idio17,
Idio20, Idio27 and Idio33 against a human anticancer memoconal antibody.
These antibodies and DNA emodding them are useful in pharmacological,
medical and boochemical fields of research.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Apr 19 13:23:53 1999
